

# Test kit for planetary gear hydraulic brake

RELIABLY TROUBLESHOOTS CAUSE OF HYDRAULIC OIL LEAKS IN THE GEAR CASE

**TTS**

A MacGregor Company

HYDRAULIC OIL LEAKED INTO THE GEAR CASE IS A SIGN OF A BIGGER TECHNICAL ISSUE.

THE TTS TEST KIT FOR PLANETARY GEAR HYDRAULIC BRAKE HELPS YOU EASILY DETECT WHERE THE LEAK IS COMING FROM.

When the oil level rises in the gear case or oil starts to overflow from the gear case, it can be difficult to troubleshoot the cause.

The TTS Test Kit for Planetary Gear Hydraulic Brake helps you determine where that leakage is coming from. Using a manometer, you can quickly and reliably troubleshoot hydraulic oil leaks and determine if the leak is from the hydraulic motor or from the multiple disc brake.

Contained in a portable case, you can take this kit with you wherever you go on board with easy access to the necessary tools.
